

**Sheffield Lake PWS  
2026 Drinking Water Consumer Confidence Report  
(for calendar year 2025)**

**Introduction**

The Sheffield Lake PWS has prepared the following report to provide information to you, the consumer, on the quality of our drinking water. Included within this report are general health information, water quality test results, and how to participate in decisions concerning your drinking water and water system contacts.

**Source Water Information**

Sheffield Lake PWS receives its drinking water from Avon Lake Regional Water (Avon Lake City PWS). Avon Lake Regional Water receives its drinking water from Lake Erie. In Avon Lake, there are two separate intakes to ensure our ability to pump from this virtually endless source of quality raw water.

Avon Lake Regional Water treats water to meet EPA drinking water quality standards. A Source Water Assessment Report was prepared for Avon Lake Regional Water by Ohio EPA. Copies of the complete source water assessment report prepared for Avon Lake are available by contacting Jason Gibboney at (440) 933-3229.

Excerpt from Drinking Water Source Assessment for the City of Avon Lake  
**6.0 SUSCEPTIBILITY ANALYSIS**

For the purposes of source water assessments, all surface waters are susceptible to contamination. By their nature surface waters are accessible and can be readily contaminated by chemicals and pathogens with relatively short travel times from source to intake. Based on the information compiled for this assessment, the Avon Lake Water System drinking water source protection area (CAZ) is susceptible to contamination from municipal waste water treatment discharges, industrial waste water discharges, air contamination deposition, combined sewer overflows, runoff from residential, agricultural and urban areas, oil and gas production and transportation, and accidental releases and spills from rail and vehicular traffic as well as from commercial shipping operations and recreational boating.

It is important to note that this assessment is based on available data and therefore may not reflect current conditions in all cases. Water quality, land use and other activities that are potential sources of contamination may change with time. While the source water for the City of Avon Lake is considered susceptible to contamination, historically, the Avon Lake Public Water System has effectively treated this source water to meet drinking water quality standards.

**What are sources of contamination to drinking water?**

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it

dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include: (A) Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife; (B) Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming; (C) Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses; (D) Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems; (E) Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

To ensure that tap water is safe to drink, USEPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least some small amounts of contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Federal Environmental Protection Agency's Safe Drinking Water Hotline (1-800-426-4791).

### **Who needs to take special precautions?**

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised people, such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infection. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

### **Table of Detected Contaminants**

Listed below is information on those contaminants that were found in the Sheffield Lake PWS drinking water.

## **TABLE OF DETECTED CONTAMINANTS 2025**

**Sheffield Lake  
PWS**

Contaminants (Units)	MCLG	MCL	Level Found	Range of Detections	Violation	Sample Year	Typical Source of Contaminants
<b>Microbiological Contaminants</b>							
Turbidity (NTU) <sup>1</sup>	NA	TT	0.15	0.01-0.15	No	2025	Soil Runoff
Turbidity (% samples meeting standard)	NA	TT	100%	100%	No	2025	Soil Runoff
Total Organic Carbon (TOC) <sup>2</sup>	NA	TT	1.47	1.0-1.86	No	2025	Naturally present in the environment
<b>Disinfectants and Disinfection Byproducts<sup>3</sup></b>							
Total Chlorine (ppm) <sup>3</sup>	MCLG = 4	MRDL = 4	1.16	0.96-1.28	No	2025	Water additive used to control microbes
Haloacetic Acids (HAA5) (ppb) <sup>4</sup>	NA	60	11.3	10.9-11.3	No	2025	By-product of drinking water disinfection
Total Trihalomethanes (TTHM) (ppb) <sup>4</sup>	NA	80	45.8	32.3-45.8	No	2025	By-product of drinking water disinfection
<b>Inorganic Contaminants</b>							
Barium (ppm)	2	2	0.03	NA	No	2025	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
Fluoride (ppm)	4	4	0.71	0.71-1.31	No	2025	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories
Nitrate (ppm)	10	10	0.925	.146-.925	No	2025	Run off from fertilizer use, Leaching from septic tanks, sewage; Erosion of natural deposits
<b>Lead and Copper</b>							
	Action Level (AL)	Individual Results over the	90% of test levels were less than	Violation	Year Sampled	Typical source of Contaminants	

		AL				
Lead (ppb)	15 ppb	NA	<1.90	No	2025	Corrosion of household plumbing systems; erosion of natural deposits
	<b>Zero out of 20 samples were found to have lead levels in excess of the lead action level of 15 ppb.</b>					
Copper (ppm)	1.3 ppm	NA	<0.092	No	2025	Erosion of natural deposits; leaching from wood preservatives; Corrosions of household plumbing systems
	<b>Zero out of 20 samples were found to have copper levels in excess of the copper action level of 15 PPB</b>					

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Sheffield Lake PWS is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at 800-426-4791 or at <http://www.epa.gov/safewater/lead>.

Infants and young children are typically more vulnerable to lead in drinking water than the general population. It is possible that lead levels at your home may be higher than at other homes in the community because of materials used in your home's plumbing. If you are concerned about elevated lead levels in your home's water, you may wish to have your water tested and flush your tap for 30 seconds to 2 minutes before using tap water. Additional information is available from the Safe Drinking water Hotline (1-800-426-4791).

<sup>1</sup>Turbidity is a measure of the cloudiness of water and is an indication of the effectiveness of our filtration system. The turbidity limit set by the EPA is 0.3 NTU in 95% of the samples analyzed each month and shall not exceed 1 NTU at any time. As reported above, the Avon Lake WTP highest recorded turbidity result for 2025 was 0.15 NTU and lowest monthly percentage of samples meeting the turbidity

limits was 100%.

<sup>2</sup>The value reported under "Level Found" for Total Organic Carbon (TOC) is the lowest ratio between percentage of TOC removed to percentage of TOC required to be removed. This removal ratio is calculated as the ratio between the actual TOC removal and the TOC rule removal requirements and other parameters. A value of at least one (1) indicates that the water system is in compliance with TOC removal requirements.

<sup>3</sup>These contaminants level found is the highest compliance value based on a running annual average. This average includes results from 2024 & 2025.

<sup>4</sup> Disinfection byproducts are the result of providing continuous disinfection of your drinking water and form when disinfectants combine with organic matter naturally occurring in the source water. Disinfection byproducts are grouped into two categories, Total Trihalomethanes (TTHM) and Haloacetic Acids (HAA5). USEPA sets standards for controlling the levels of disinfectants and disinfectant byproducts in drinking water, including both TTHMs and HAA5s."

## **DEFINITIONS**

1. Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
2. Contaminant: Any physical, chemical, biological, or radiological substance or matter in water.
3. Maximum Contaminant Level (MCL): The highest level of contaminant that is allowed in drinking water. MCLs are set as close to MCLGs as feasible using the best available treatment technology.
4. Maximum Contaminant Level Goal (MCLG): The level of contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
5. Maximum Residual Disinfectant Level (MRDL): The highest residual disinfectant level allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
6. Maximum Residual Disinfectant Level Goal (MRDLG): The level of residual disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
7. NA: Not Applicable
8. ND: Not Detected
9. NTU: Nephelometric Turbidity Units
10. Parts per billion (ppb) or Micrograms per Liter (ug/L) are units of measure for concentration of a contaminant. A part per billion corresponds to one second in 31.7 years.
11. Parts per million (ppm) or Milligrams per Liter (mg/L) are units of measure for concentration of a contaminant. A part per million corresponds to one second in a little over 11.5 days.
12. Total Organic Carbon (TOC) has no health effects. However, TOC provides a medium when the water is disinfected for the formation of disinfection byproducts. TOC removal early in the treatment plant is required.
13. Treatment Technique (TT): A required process intended to reduce the level of contaminants in drinking water. For example, Avon Lake Regional Water adds lime to increase the pH of our finished water to maintain compliance with the lead and copper rule.
14. VOC: Volatile Organic Chemicals

15. WTP: Water Treatment Plant

16. The "<" Symbol: A symbol that means less than. A result of <5 means that the lowest level that could be detected was 5 and the contaminant in that sample was not detected.

### **License to Operate (LTO) Status Information**

In 2025 Sheffield Lake had an unconditioned license to operate our water system from the Ohio EPA.

### **Important Information concerning reporting requirements not met for Sheffield Lake PWS**

We were required to submit a verification report of our notifications but failed to meet the deadline. As such our system failed to demonstrate, in a timely manner, that it delivered annual notifications and information to affected consumers with lead, galvanized requiring replacement, or lead status unknown service lines as required by July 1, 2025. Although the failure to comply with the reporting requirement does not create a risk to public health, we are required to inform you of this violation and provide additional information including what we did to correct the situation. It is important for consumers to know if the water they are receiving has been delivered through a lead, galvanized requiring replacement (GRR), or lead status unknown service line so they can make decisions on whether and what actions to take to reduce their exposure to lead in drinking water. **What should I do?** There is nothing you need to do at this time. You don't need to boil your water or take other actions. Remember, boiling water does not remove lead from water. For more information on reducing lead exposure around your home/building and health effects of lead, visit the EPA's websites at <https://www.epa.gov/ground-water-and-drinking-water/basic-information-about-lead-drinking-water> and <http://www.epa.gov/lead>

**What is being done?** While we did not certify and notify the State as quickly as we should have, we provided the required notifications to persons served, as well as the missing information to the state upon receipt of the violation notice. For more information, please contact Patrick Hastings, Director at 440-949-6259 or by email at [servicedirector@sheffieldlake.net](mailto:servicedirector@sheffieldlake.net)

*\*Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail. \**

### **Public Participation and Contact Information**

#### **How do I participate in decisions concerning my drinking water?**

Public participation and comments are encouraged at regular meetings of the Sheffield Lake City Council which meets the second and fourth Tuesday of every month at 7:00PM at the Sheffield Lake City Hall located at 609 Harris Rd. For more information on your drinking water contact Thomas Erwin, Operator in Responsible Charge, or Patrick Hastings, Service Director, at 440-949-6259.
